

- As an admin I need to be able to provide multiple data sources so that I can make sure all available company data is imported.
- As an admin I need to be able to provide data sources like CSV and JSON files so that I can import offline resources.
- As an admin I need to be able to schedule data imports so I can make sure that the integration runs when data is no longer being updated, i.e. after regular working hours.
- As an admin I need to be able to see what the software is doing at any point in time so that I can catch breaking errors after they have happened and trace issues for troubleshooting.
- As an admin I need to be able to start and stop the program manually so that I can troubleshoot more effectively.
